About the book

Obedience literature emphasises that legitimate authority is a powerful and compelling force. This is particularly evident in Milgram’s (1963, 1974) classic experiments where participants systematically shocked a helpless victim at the bidding of an experimenter. This literature review provides evidence that senior people have a powerful effect at influencing decisions of subordinates, even when outcomes contravene that individual’s established views of best practice. Findings are consistent with the view that the majority of subordinates have as their first duty an obligation of obedience to instruction from superiors. This raises the question of how far it is possible for an employee to work as an autonomous practitioner within a hierarchical structure. In the absence of a feedback system, innovative thinking and talent may be overlooked and deficiencies and potential disasters lie undetected.

TABLE OF CONTENTS

Abstract 3
Introduction 4
Method of review 5
LABORATORY OBEDIENCE EXPERIMENTS
The Milgram experiments 6-11
The Holland experiments 11-13
The Mantell experiments 13-14
The Sheriden and King experiments 14-16
The Kilham and Mann experiments 16-17
The Shalala experiments 17-18
The Shanab and Yahya experiments 18-20
The Meeus and Raaijamakers experiments 20-22
OBEDIENCE OUTSIDE THE LABORATORY
The Holocaust 23
My Lai 24
The similarity between laboratory and naturally occurring situations 25
APPLIED OBEDIENCE EXPERIMENTS
The Hofling, Brotzman, Dalrymple, Graves and Pierce field experiment 26-28
The Rank and Jacobson field experiment 28-31
The Hollins Martin field experiments 31-36
The overall relevance of obedience studies 36-39
Conclusions of the literature review 39
Implications for organisations 39-41
References 42-46
