Paul Atkinson, Cardiff University

Abstract

We build on the work of Kurt Wolff to capture some distinctive aspects of ethnographic fieldwork. Drawing on the sociology of knowledge and phenomenology, Wolff introduced and developed the idea of surrender-and-catch in order to encapsulate the twin processes of engagement and reflection. While Wolff’s ideas were not developed exclusively in relation to ethnography, he grounded them in his own community study. But he extended the general idea to encompass virtually any aspect of sociological or phenomenological analysis. We extend the idea to incorporate what we call the ‘imps’ of ethnographic fieldwork. For neither surrender nor catch are themselves predictable or perfectly under the ethnographer’s control. While fieldwork is itself unpredictable, there may be many unanticipated ‘catches’. Moreover, there is often an ethnographic ‘imp’ that intrudes itself, questioning the very desirability or good sense of the fieldwork itself. The imps arise unbidden but can pose searching, sometimes unwelcome – though ultimately productive – questions. We illustrate the paper from a brief fieldwork encounter with the world of studio photography.

Introduction: surrender-and-catch

There are many ways to capture and summarise the tensions - personal and academic – of ethnographic fieldwork. Likewise, there are many ways of reflecting on the emotional and intellectual experiences of ethnographic fieldwork. For key discussions of the general issues see: Coffey (1999); Watson (1999); Wengle (1988); Young and Goulet (1994) All treatments are in fundamental agreement: the conduct of fieldwork and the iterative process of analysis call for a reflective practitioner, who can simultaneously engage with her or his chosen field and develop an analytic perspective. Fieldwork and analytic reflection demand a characteristic kind of ethnographic imagination. The ethnographer’s intellectual, personal and even existential selves are implicated (Atkinson 2014). The emotions of a fieldwork experience can be as significant as conceptual development. The outcomes of ethnographic fieldwork are unpredictable, as are the personal consequences. Ethnographic fieldwork can have a transformative effect on the researcher. For many, such personal consequences are
unintended, deriving from unforeseen and unforeseeable encounters in the field and their personal impact. For some the personal transformations are intended: a number of ethnographers have deliberately sought out process of conversion or socialisation in the interests of anthropological or sociological understanding. Examples of such conversion experiences include: Carr (2015); Hagedorn (2001).

We do not seek to review all of those aspects of fieldwork here. Rather, we adopt one perspective in order to illuminate a key aspect of the fieldwork enterprise. We deploy the idea of surrender-and-catch, developed and expanded upon by Kurt Wolff (1976). He derives the idea in part from his own fieldwork experience during a community study of ‘Loma’, New Mexico (Wolff 1964), although he acknowledges that the explication of his approach post-dates his work at Loma and the publications that flowed immediately from it. Indeed, on reflecting on his fieldwork experience at Loma, Wolff documents a frustration with himself – that his fieldnotes failed to capture the embodied, aesthetic and poetic contours of the field and his relationship to it (Wolff, 1976). His subsequent work, with its emotion-laden, self-analytic insight, and its philosophising and poetic quality espouses and exposes the phenomenology he deemed ‘surrender and catch.’ Thus, in Wolff’s hands, surrender-and-catch is spun into an idea that extends much further than the narrow confines of ethnographic fieldwork.

On surrender

On surrender, Wolff writes, ‘to surrender means to take as fully, to meet as immediately as possible whatever the occasion may be. It means not to select, not to believe that one can know quickly what one’s experience means, hence what is understood and acted on’ (Wolff, 1976: 20). He refers to surrender as a form of ‘cognitive love’ both embracing and apprehending the experience of the field as an ethical, aesthetic and embodied encounter. Five core features are implicated in this surrender:

1. Total involvement, the differentiation between subject, object and act disappears

2. The suspension of received notions – existing categories, theories and concepts are suspended, put into abeyance – neither denied nor affirmed.

3. The pertinence of everything – awareness, alertness, presence and attunement to the phenomenon.
4. Identification – not ‘with’ individuals, but with the act of surrendering, its occasion, moment, objects and subjects. In the catch this identification necessarily wanes in order to understand, conceive and tell others about the learning gained.

5. The risk of being hurt – not only in the experience of surrendering, but acting on, creating and espousing the catch.

On first reading, concepts like ‘cognitive love’ may strike us as unduly Romantic, but Wolff is drawing attention to a myriad ways of knowing which are dependent upon a sensibility of active surrender. His written form and works attest to the ties he conjures between aesthetic, embodied and experiential knowing as forms of ‘cognitive love’. For cognitive love is understood as openness to knowledge, a love for knowledge and its quest. Wolff does not constrain himself, unlike other phenomenologists discussed below, with a purely ‘rational’, disembodied, ahistorical and asensorial form of knowing. For Wolff, the mess and miracle of the field are only encountered by the fullness of surrendering.

Wolff’s notion of surrender-and-catch is attractive. The imagery of surrender implies an unconditional commitment to the field or object of our inquiry. It calls for personal exposure; it leads to risky and precarious identities. Surrender means that a chosen field of experience enfolds us, as we embrace it. That is not merely a prerequisite or a preliminary to real research and analysis. It is the creative research process, or at least it is a moment of it. In terms of traditional fieldwork, our participant observation means that we participate wholeheartedly. It is at once a personal, even existential, commitment and an intellectual one. Surrender means that we launch ourselves into unanticipated events and towards as yet unknown others. In the act of surrender we necessarily suspend our taken-for-granted, common-sense ideas, in order to recapture a renewed understanding of a social world about us.

Wolff’s formulation owes much to the phenomenologists. But it also adds something. Social phenomenologists like Alfred Schütz (1964) also emphasised the need to approach a given social domain as a ‘stranger’. The process of estrangement implied the suspension or bracketing of everyday assumptions, of our ‘thinking as usual’. This *epoché* means that while our own common-sense is bracketed out, we can treat common-sense, practical knowledge as a topic of inquiry. But there is a profound difference in the two formulations. The implied social researcher in Schultz’s version remains at a cognitive level. He or she may find the process discomfiting, but that always seems to be a loss of intellectual poise. The
A phenomenologist who brackets her or his own cultural categories is at a loss, until the new field of experience is grasped through the intersubjective engagement with the host community. Ethnographic surrender is totally different from the detached, wry and ironic observations of the flâneur/se (Tester 1994; Elkin 2016). The flâneur can never surrender, except perhaps to her or his own self-absorption. In observing the passing scene, the flâneur ultimately celebrates her-or himself, in a self-congratulatory display of cultivated indifference. However apt may be the flâneur as a model or metaphor for urban observation, and for the observant navigation of a given social scene, the flâneur remains fundamentally untouched, unmoved. S/he always withholds rather than engaging with any given social domain. Wolff’s researcher is a more existential explorer. It is not merely the loss of common sense that marks or initiates the process of surrender. It is closer to being a loss of self. It certainly can imply a loss of control. It is an affective as much as a cognitive exploration.

As Wolff (1976) himself acknowledges, ‘surrender’ can seem to imply what used to be called ‘going native’. That is the loss of analytic distance, and the loss of anthropological or sociological perspective. But it is clear that such a form of surrender is not intended, and it is not in that sense that we employ the term here. Wolff helpfully draws a distinction between overwhelming and unexpected ‘surrender’ and the work of a sensibility which he deems, ‘surrender-to’. This is the frame within which we operate here. In surrender-to, metaphysical submission becomes disciplined and transformed into methodology. Of the epistemological sensibility of surrender-to, Wolff (1976:26 his emphasis,) writes, ‘I can try to surrender to something or somebody. To surrender-to is to concentrate, to dedicate or devote oneself, to pay utmost attention’. Thus, cognitive love can be a willed love, a worked-at and crafted sensibility.

Surrender-to implies something different from and more than simply the intellectual suspension of the ethnographer’s own preconceptions and taken-for-granted categories of knowledge. We think it means something more akin to an appreciation – in the fullest possible way – that for the participants, the here-and-now of their everyday activity is the paramount reality. It means, therefore, an engagement – however temporally bounded – in the work of making that reality happen. It means experiencing that when we observe a social scene, nothing else can matter so much at that time. It means an openness to one’s fellow women and men that encompasses, to the full, the spirit of empathy.
The Catch

If surrender means an impulsive and creative imagination, then catch implies the rational and reflective or analytic capture of experience, of knowledge gained, of theorised understanding. The catch is a deliberate metaphor – the net which on surfacing brings together intricate glimpses, moments, ideas, and revelations. The catch is not simply the ‘outputs’ of research – monographs and papers - but can include moments of clarification, the creation of a question, the production of what Coles and Thomson (2015) call ‘in-between writing’- harried notes, sketches, descriptions. Indeed, this paper is itself testament to the varied forms the catch may take.

In terms of Mead’s social psychology, surrender is a commitment of the impulsive I, while catch is the prerogative of the socialised Me (Mead 1934; Atkinson and Housley 2003). For Mead, understanding, including self-awareness, derives from the internal dialogue between the I and the Me. They are not separate entities. They are aspects or moments of the generic process of engagement with the world and our fellow social actors, through which self-consciousness emerges. In the same way, surrender and catch are not separate phases of inquiry, or methodologically distinct moves. They are dual aspects of a process of engagement and reflection. The social explorer surrenders to a social world, to fellow women and men, while the catch is an emergent process of reflection (often itself tacit) that is a necessary moment in any such encounter or activity.

Wolff is clear on the epistemological relationship between surrender, catch and the social researcher, writing that man is a ‘mixed phenomenon’ there is no ‘escape’ from the social. Rather, that in the act of surrender, the reasoning generated is situated and contextual – specified not ahistorical. Surrender is a serial condition. There are multiple, co-existing and overlapping social worlds. Surrender to the paramount reality of one may be complemented by surrender to a parallel, contrasting social reality. Consequently there may be a palimpsest of surrendered-to social worlds. On the ‘world’ of surrender, Wolff writes (1976:169), ‘our worlds, including their boundaries, thus our modes of being, are called into question.’ This is the world of commitment, of suspending received notions, of the pertinence of everything and it may well be a disorienting as well as illuminating experience. In moving between the ‘world of suspension’ (surrender) and the everyday world of the catch, the ethnographer is ‘thrown back upon oneself” demanding the reflexive quality we display here. As Wolff describes (1976: 170) it is the movement between these ‘worlds’ which provides the liminal
sense of being lost in transit, of having to begin again as we oscillate between encounter, reflection and analysis. We think it is this existential space which gives rise to the Janus-like quality of the Imp.

**Surrender and the imp of fieldwork**

There remains, however, the open question: Is surrender ever total? Irrespective of whether – for the moment – we regard surrender as normatively desirable, is it ever achieved with the engagement and commitment that surrender implies? There is often a form of resistance that comes between the self and the field, such that surrender is partial or interrupted. We identify a distinctive interruption of the inner dialogue between the impulsive I and the reflective Me, between the moment of surrender and the process of catch. That interruption we identify as the Imp of fieldwork. (We are grateful to Anna Lisa Tota: a comment of hers prompted these reflections.) The Imp means that surrender is, in many cases, only provisional. It is not the equivalent of the analytic, reflective ‘catch’ of Wolff’s formulation. But it can have impact directly on both the fieldwork itself and the process of analytic reflection.

Many fieldworkers will recognise the Imp, or something like it. It is a voice that interrupts both surrender and catch, as it impertinently questions and undermines the very enterprise. The Imp voices occasional resistance and continuing scepticism. The Imp interrogates us even in the process of immersion and surrender. It prompts us: Why are you doing this? It is that small voice of grudging common sense. Why, after all, are we – in one case a retired professor – putting ourselves through the exacting regime of fieldwork, or even of learning new skills or concepts? Why are we not safely in our own office or study at home? Would life not be simpler were we to content ourselves with yet another exegesis of a dead white male ‘theorist”? Those are the kinds of things the Imp drops into our inner ear. But as we shall see, the Imp is capable of more than intellectual resistance. It can encourage us to confront our motives and our commitments – personal and intellectual – in the field.

The Imp, after all, arises directly from precisely those personal and existential commitments that make fieldwork possible – and rewarding – in the first place. The Imp owes its existence and its force because we make certain kinds of commitment. We voluntarily place ourselves in a position of vulnerability and potential unease. Our presence in the field is always conditional, however unconditionally we commit ourselves to its realities.
We shall develop these comments through a concrete fieldwork exemplar. We illustrate the topic from a brief foray into the world of photography – particularly art-nude studio photography. It will display some of the contingencies of surrender-and-catch, while the Imp of fieldwork simultaneously makes problematic and productive the ethnographic process.

**Photography and surrender**

Paul has taken classes in glassblowing, woodworking, silversmithing and life-drawing (Atkinson 2013a). As well as their intrinsic interest as examples of skilled activity, they also bring together the ethnography of craft and the craft of ethnography (Atkinson 2013b). They are therefore methodological as well as substantive exercises. They all involve the researcher learning embodied skills, in activities that he had never undertaken previously. Embodied and practice-based ethnography is premised upon its reflexivity: to ‘know’ the phenomenon of life-drawing or silversmithing is to surrender to the practice and to catch the knowledgeable and embodied doing. There is a close relationship between knowledge, technique, the body and the culture of those engaged in practices of doing, making and creating (Atkinson 2014).

In exploring these creative practices we must attend to the centrality of the body as a source of knowing – a sensory, tacit and embodied form of knowledge which can only be attained by doing. We ‘know’ through the senses (Strati, 1999), we are bodies (Merleau-Ponty, 2002). Feeling, corporeality, aesthetic categorisation and experience are to the phenomenologist, and to Wolff, not the ‘object’ of one’s attention, but the instruments, the ways of seeing that attention.

Having undertaken an intensive four-day course in life-drawing, Paul wanted to try nude art-photography in a studio, an aspect of photography he had never tried before. The four-day course he embarked on with a professional tutor (‘Stefan’) had several components: a day re-learning the elements of the digital camera, a day of outdoor photography, a day learning the basics of post-production, and a day in the studio with a professional model. Here we do not attempt to do full justice to the overall learning experience, and we focus on the studio session. The session is described through extracts from Paul’s fieldnotes.

It was an attempt to study and learn photography *per se*. In other words, it is informed by a phenomenological commitment to examining the phenomenon itself. It follows the phenomenological and ethnomethodological critique that too many sociological studies lose the phenomenon, because they want to look behind, through or beyond the phenomenon itself in search of something ‘social’ (Garfinkel and Sacks 1970; Lynch 1993). Here we treat
photography as a topic in its own right. It is not primarily a research resource, as a means of
data-collection, nor is it a resource whereby to study something other than itself (race, class,
gender, poverty). This approach requires a commitment to the activity itself. It thus calls for
Wolff’s surrender. Equally Wolff’s argument that the field of vision both expands (the
pertinence of everything) and retracts (abeyance of received notions) speaks to the
simultaneity of epistemic practices when encountered directly – in this case of the
photographer, photographic practices, and the ethnographer. This is important as otherwise
one would become preoccupied with one’s own position in the field, rather than focusing on
learning and practising practical technique. It calls for something like surrender, a thorough
commitment in the everyday sense that, for the time being, it is engrossing. In the street or in
the studio, the activity of photography must define the primary reality of the action. One
cannot take a landscape photograph, capture a candid portrait, or take photographs in the
studio in an offhand manner. It calls for care, concentration and commitment to the moment-
by-moment action. One may not be able to equal the ‘definitive moment’ of the classic,
iconic photograph, but failing to work with serious intent will result in more-or-less random
snaps rather than purposeful photographs. The intentionality of the act demands focused
attention (see Eberle, 2017 for a parallel essay on the phenomenology of photography itself).
As we have already noted, when embracing surrender-to, attention goes beyond purely
observational, analytical and ‘rational’ knowledge, and is open to affective, aesthetic and
embodied forms of knowing.

Consequently, this is an approach to photography that examines some of the ‘whatness’ that
makes photography a concrete activity. It is grounded in the technology of photography itself
(backgrounds, lights, cameras), and the interpersonal encounter that makes a series of
photographs possible. It also derives directly from the processes of learning and applying
technical, embodied technique (Mauss 2006, 2007). If one is to learn technique – whatever
the specific skill or craft – then full attention and concentration are called for. Surrender to
the encounter and the social world it reflects means that one must be committed and open to
learning the craft, embodying the skills, and applying the knowledge. Like the rehearsal
studio (Atkinson 2006), the photographic studio is an intensely focused space. For the
duration, it is an enclosed space that physically and phenomenologically commands complete
involvement. So surrender in and to the studio is imperative. For the duration of the session
what ‘matters’ is what occurs between the participants, the techniques, the lights, the camera,
and the images that emerge. Surrender, in Wolff’s sense is therefore a necessary orientation to the situation.

**Fieldwork**

The fieldwork in this setting, as in the other craft settings studied, follows a pattern. First, Paul, as fieldworker, participates in a class, as a learner. Some such classes involve small groups of learners, while others – including the photography sessions – involve one-to-one tuition. Participation is complete. During the classes, Paul is totally absorbed in trying to learn the new techniques, and to achieve an appropriate level of practical competence. This implies full concentration and embodied commitment. One cannot hope to learn if such commitment is lacking; half-hearted participation will not yield the sort of cognitive and embodied learning that is sought. At the end of each day he dictated a detailed text. Each day’s lesson would typically yield several thousand words. These could, of course, be classed as ‘fieldnotes’, but they go beyond the style even of detailed, processed notes. They incorporate reflections on the fieldwork itself and on emergent analytic themes. They are, therefore, best thought of as intertexts, or ‘inbetween-texts’ (Coles and Thomson 2016) in that they mediate between the ‘field’ and the ‘analysis’. They are liminal, looking back to the concrete work of embodied learning, and projecting forward aspects of analytic reflection. In that sense, therefore, those inter-texts inscribe the twin aspects of surrender and catch. They document the embodied, aesthetic and practical engagement with the field (surrender), while incorporating the attempt to reflect, sometimes critically, on the fieldwork and its implications. Between the concrete and the reflective is found the space of the Imp. That is, a third voice that intrudes, unbidden, to confront the ethnographer in the very process of conducting the fieldwork, contributing to the complexities of methodological and analytic reflection. Like grit in the oyster, the Imp challenges us to justify to ourselves how and why we are conducting our fieldwork. It can mediate between the I of the fieldwork and the Me of reflective analysis. The series of successive learning exercises, and their documentation, is primarily a methodological exercise. It is a sustained attempt to engage with an embodied, phenomenological analysis of practical pedagogy and embodied learning. Learning as a novice can help to render visible otherwise tacit knowledge and skills. The enterprise is, therefore, intended as a contribution to the ethnography of knowing and to our understanding of the ethnographic enterprise (Atkinson and Morriss, 2017).

**Surrendering-to aesthetic knowing**
This is not only Paul’s first attempt at art nude photography. It is also his first experience with studio lighting since he used old-fashioned photoflood lamps in aluminium reflectors fifty years previously. So he has to be instructed in that basic technique.

Stefan explains that we shall be using flash – which gives an instantaneous, powerful burst of light. I have certainly never used studio flash before. It will be interesting. It will also help me, as it overcomes camera-shake – a problem that has become more obvious as I get older. I had thought that at least some of today’s work might be using the camera on a tripod. I point out to Stefan that I have brought the cable-release for my camera. But he says I shan’t need it. And in the event, we both use the cameras hand-held. Looking back, I wonder if I would have had a very different approach to the photography had I used the camera mounted on a tripod. It would have slowed down the entire process. One can but speculate that it might have changed not only how I took the photographs, but it might also have slowed down the model. She – as I shall describe later – tended to move a great deal, almost dancing. So that none of us spent enough time thinking about the relationship between her body and the light. Perhaps too I was thinking of my old Rolleiflex, and hankering after work with a Hasselblad, with a 1960s self-perception (David Bailey or Terence Donovan?) to go with it.

As the session progresses, speed and control take on more significance. Paul and Stefan discussed taking high-key and low-key photographs. High-key refers to photographs where the background is white and the model is brightly lit; low-key pictures have dark or black backgrounds, and the model is only marginally illuminated. He had succeeded as a student in taking some high-key portraits and was hoping to achieve something good in low-key too. It lends itself to a more abstract approach to the body – the light spilling onto shoulders, breasts or hips, the face lit from behind or from the side. It is a minimalist emphasis on light and form.

The arrival of the model creates a greater sense of urgency to the proceedings: one cannot go on talking about cameras, lights and technique. The imperative to put some of it into action becomes more pressing. She has a professional name (‘Belle’). She is dark with long straight hair, wearing spectacles. Her skin is pale. She is about 5’9” tall. Naked, she is slender, with a particularly small waist. Paul attempts to maintain the everyday courtesy of civil inattention to her nakedness when not photographing her, or when she is undressing. The nakedness of the model is taken for granted, becoming a seen but unremarked-upon feature of the
encounter. Everyday prurient interest in the unclothed body (irrespective of gender) is so often secondary to the demands of crafting an image. The personal body is translated into a different array of preoccupations. In the photographic studio, the camera takes the ‘likeness’, but similar issues of seeing and image-making are there – the play of light and shade, the volumes and contours of the body.

We begin by simply setting up two lights and we both take some basic photographs of Belle simply standing in front of the background, so that we can check for exposure values and set the cameras. She is standing in a relaxed, informal way. In the few pictures I take of her, she looks ‘normal’, in the sense that her hair hangs loose over one shoulder, and her body is not tensed. The lighting creates no particular effect, and the resulting photographs have no special merit, other than showing Belle in a natural manner, with flat lighting, and in natural colouring (as opposed to the high- and low-key modes).

The model’s skin is pale, but in the rim-lit shots, it looks perfectly dark. I take some abstract shots. Abstract here means nothing very intellectual. In fact it really means concentrating on and focusing on isolated aspects of the body. It means paying close attention to how the light falls on the body’s contours – inevitably in this case, shoulders, breasts, hips and buttocks. The low-key images are also pleasing, as Belle stands with her body relaxed, looking pensive, with no visible strain. The images feel unobtrusive, and even close-up shots do not give the impression of trespassing on the model’s privacy.

As the day progresses, Stefan changes the lighting so that most of the images are in high key. Belle poses more overtly. When standing she is almost always on tiptoe. At one point I say to her that it really isn’t necessary for her to be en pointe, but she says she actually feels better doing it. I agree with her that it certainly creates very different lines, because it puts her legs, back and torso in tension. The overall result of course, is the same anatomical effect as that of high heels. In preparation for high-key pictures, Ion asks Belle to oil her skin…. She stood by an open curtain at a window with her back to us and her dressing-gown loosened from her upper body, hanging loose behind her. As the cool natural light from the window spilled round her, I took a casual photograph of her on my phone…. Her pale skin and the natural light meant that in many ways it was the ‘best’ pictures of the day…. There is good reason for oiling the model’s skin.
Under the lights it enhances any natural sheen. Belle’s pale skin looked almost translucent, like white alabaster, and it emphasised the effect of the lights. The sheen is artificially beautiful, perhaps, but then it is all a matter of artifice.

Here, then, aesthetic surrender leads to a direct - unavoidably gendered - appreciation of the model, enhanced by the fact that she is not ‘modelling’. It is a ‘candid’ shot of a quiet, private and ‘natural’ moment. The very writing of the notes moves towards a direct apperception of the model’s skin and the light that falls on it. The socio-materiality of bodies and light and oil is captured here as the researcher pays attention to the sensory-stimuli within which he is immersed. The surrender to the light and to the body, the aesthetic connections and the intent focus on the present, coalesce - producing an ‘arresting moment’ (Shotter, 1996) of heightened awareness. In the net of the catch, Wolff’s commitment to ‘the pertinence of everything’ bears fruit. The hours of focus, of drawing in preliminary emotion and the fumbled grasp for the language of technique culminates here in a unity that pervades the entire experience, almost overcoming its constituent parts which are nonetheless noted as part of the immersive surrender. It is in the conviction of the harmony of qualities which underpins both the years of training in the studio Stefan brings, and the distinctiveness of aesthetic experience itself. The catch, whilst not foreseeable, is set in train by the state of high tension and concentration, of the essence of ethnographic practice – paying intent attention.

**Embodied knowing: The Imp and the body**

Belle did a lot of standing poses. She often posed like a dancer, and adopted somewhat theatrical poses. The issue of posing highlighted issues of control.

To put it at its simplest, I am (semi)conscious of not being in control of what is going on. I am not surprised by this, as of course I have no relevant experience. But I feel that the afternoon goes by as a pace that is too fast for me. Not that I want to potter along unduly slowly. But in retrospect I should have called for a pause to reflect on what we were doing and what I was learning. As Belle went on posing and as Stefan and I kept shooting pictures, I was the one with little or no control over what I was doing. To some extent, I realise, I was just firing the shutter more or less whenever the model and Stefan settled on a pose…. As a result I now realise that I was not fully learning to look and to see. If I were thinking about the technicalities and the aesthetics again now, I would (ought to) be paying much more attention to the lighting: how the model’s arms
were throwing shadows, how we might want to be moving the lights or changing a reflector to alter the overall illumination of the body and the background. And I ought to have been thinking much more about framing the shots. When I review the pictures I took I can see that some of the framing ‘worked’, in that I have those aspects of the model I wanted to concentrate on framed and composed as I would have liked. But sometimes, not least from being lazy and careless, I have screwed up, so that there is too much or too little space round her, or that the picture is poorly balanced. Sometimes, quite consciously, I just photographed Belle as she was posing with little or no concern for the background- not making sure she was always framed only against the white background – more as a documentary reportage of the overall set-up, and as a record of how Belle was using her body. This was particularly the case towards the end of our session together.

In thinking about the day’s activities in the studio, Paul had done some elementary homework on art-nude photography. In particular he had studied the images by Edward Weston, regarded as among classics of the genre. Such an awareness meant that it was impossible to confront the phenomenon in a completely unmediated way. That is, unlike Wolff’s importuning – it is impossible, indeed problematic to suspend all received notions. One cannot confront the nude model without a thorough immersion – however tacit – in the history of painted, drawn and photographed images. Surrender cannot ever be perfectly free of such thoroughly sedimented cultural resources. Indeed, as we shall see, consciousness of such a visual history invites the Imp to intervene.

Earlier in the day I had shown Belle a few sketches I had made, some from my life-drawing class, and at least one from a classic Edward Weston. She said of the Weston ‘Oh yes, everyone wants that one’, and I admitted that it was a classic. She also said it was nice to be shown sketches, as she was normally only given stick-figures. Anyway, during the afternoon we did some poses that were based on her sitting on the floor, including variations on the Weston pose. That naturally meant that I had to sit or kneel on the floor. It provides the right height for shooting, but my joints are not suited to such physical efforts, and it became quite difficult. Getting to my feet was not always easy. My knees hurt. My right hip was painful. There was, therefore, an ironic contrast between the model, moving and putting herself into a variety of poses, moving like a dancer, and me uncomfortably and awkwardly grovelling on the floor.
This is yet another example of the dynamics of control: control over the body, control over the setting, control over the equipment, control over the photographic image. In this case, it is more a matter of losing or ceding control. In research encounters, particularly those involving embodied practices, surrender may happen and the researcher may be aware of it. In this example, the materiality of the space – the hardness of the floor and the glare of the light, the sheen of contoured bodies – is noticed as the researcher ‘gives in’ and ‘over’ to it. Through the commitment to surrendering-to, even to the extent of ‘grovelling on the floor’, the researcher reaches for a vocabulary developed through immersion in embodied knowing. The extracts themselves demonstrate how in the stream of embodied dialogical activity we relate to our surroundings, the materials and tools which comprise the artfulness of photography, how we make sense of them. Surrender by temporarily quieting of the impervious Imp of the ego reveals the importance of light, heat, height in accomplishing photographic studio work. So surrender is an important process of learning geared towards gaining insight and a shared idiom with practitioners.

The embodied Imp thus invoked the physical and the personal discomfort of the studio encounter. It also raised more fundamental questioning of the researcher’s entire activity in the course of his surrender to the studio, the model and the act of photography, as we elaborate on below.

The catch and the Imp

Surrender to the studio, to the camera, to the tutor, to the model, and to the situation implied a willing suspension of intellectual distance and critique. As we have emphasised, thoroughgoing commitment and engagement are called for. The truly participant observer, who wishes to acquire and use practical skills, will not achieve any kind of competence or mastery on the basis of resistance. In Wolff’s terms, surrender takes place in the field, and it also means surrender to the field. So having decided to try art nude photography and studio technique (in however preliminary a way), Paul had to undertake it without reservation. One cannot hold back without committing bad faith vis-s-vis one’s fellow participants.

So what is the catch in this case? Overtly, the catch resides in an explication of the techniques and practicalities of photography itself. It leads to a heightened awareness of the nature of light, partly as a purely physical aspect of illumination, and of exposure values, and partly as an aesthetic phenomenon. Light and the body interact. The direction and strength of the light transform the body into new shapes. Each body demands special attention. The turn of the
shoulders, the thrust of a hip, or the swell of a belly—these all demand attention if the photograph is not to be a photo-booth snap of anyone or everyone. The camera is never a completely inert medium. It calls for comprehension and some level of technical mastery. The exposure is especially demanding of control. The combination of speed (ISO), lens aperture (f-value) and shutter-speed requires constant and repeated attention, not least when lighting conditions change. The choice of lens – specifically the focal length – also requires informed decision-making. The focal length implies a different perspective. In the studio, a short focal length can distort the figure. That can be creative: a shot along a recumbent figure can elongate the legs or the body relatively. Unthinking use can be especially unflattering.

Attention must be paid to the model’s body too. The photographer must ask him/herself questions all of the time. Questions are of the sort: Is she casting a shadow across her own face? Do her arms get in the way? Where are her hands, and do they divert the viewer’s attention? Is there a catch-light in her eyes? Are there trailing hairs across her cheek? How is the light spilling onto her? It is all too easy for the photographer to shift position – perhaps trying to capture or emphasise some particular feature, angle or lighting effect - but forget to make appropriate adjustments. If I move a bit to the right, do her eyes still have sufficient light? Does my change of position foreshorten something? If I position the camera lower, will that radically change the light and shade? Indeed, will that look too intrusive or pornographic? Will lighting her from the side or slightly from behind make the faint down on her skin look too prominent? Am I making her look hairy? Has she got goose-bumps?

The catch, therefore lies in a combination of practical and technical competences and judgements. These in turn form the basis for a close scrutiny of the practical accomplishment of embodied craft skills. They also furnish the resources for a phenomenology of looking and seeing, and of the twin-lens observation of the participant observer. But the surrender is not absolute, and the catch is not untouched by unbidden issues and ideas. The Imp of fieldwork interposes itself in the guise of such contingent, unforeseen, and sometimes unwelcome interventions.

The aesthetics of looking collapse any clear distinction between objective technique and the photographer’s subjective engagement. The model is more than and other than an object to be observed and recorded on camera. Her age and appearance invite a particular kind of looking. The visual is always intrusive, while the proximity of the naked body simultaneously intrudes
on the photographer. Wolff’s version of surrender always implies an embodied, aesthetic
dimension, and the practice of art-nude photography amplifies that sensibility.

During the fieldwork and in writing up the fieldnotes shortly afterwards, Paul reflected:

Some of the images I take in low-key mode look quite pleasing when I look at them in
the camera. At least, they look more or less how I would have wished. The model’s
skin is pale, but in the rim-lit low-key shots, it looks perfectly dark. I take some
‘abstract’ shots. Abstract here means nothing very intellectual. In fact it really means
concentrating on and focussing on isolated aspects of the body. It means paying close
attention to how the light falls on the body’s contours – inevitably in this case,
shoulders, breasts, hips and buttocks. So herein immediately lies a central issue. In
doing this studio exercise I am implicitly recapitulating a century of male photography
of the female nude. Of course I cannot do it with any great degree of technical
competence. But I am forced (or have volunteered myself) into a mode of practice that
is at least questionable. I must inevitably think not just about ‘the lighting’ but also how
the light falls on her breast or on her nipple. The ‘abstract’ images that I take are also
decontextualised aspects of her body – her buttocks, her breasts. So is this just yet
another expression of the cliché male gaze?. Here I am with a total stranger, her time
paid for, looking at parts of her as dispassionately as I can. I do not feel embarrassment
for either of us at the level of ordinary interaction. She is a professional, and I am an
amateur learner. But the normal internal dialogue and acts of memory that are routine in
fieldwork have another dimension.

The learner surrenders to the situation. He gives up control, and enters into the local activity.
Control is surrendered: to the teacher, who manages the technical set-up of the studio and the
lights, and to the model, whose posing is only minimally under Paul’s control. If one is
learning here, is one of necessity recapitulating the past work of others? So surrender risks
merely recapitulating an objectifying gaze.

The Imp thus intervenes in the processes of fieldwork and reflection. It helps us to recognise
the debts we have to those who have trod these fields before us and of the wisdom and
mistakes made. It may also help us to keep our ethical commitments sharp.

Conclusion
What we hope to have done in this paper is twofold. Firstly, to elucidate the continuing and under-acknowledged work of Wolff for understanding embodied fieldwork encounters. In exploring the challenges and joys of fieldwork by way of vignettes from a study of photographic practices we have highlighted sensorial, embodied and aesthetic forms of knowing. Secondly, we have taken seriously the challenge of surrendering-to the phenomenon, by way of the character of the Imp. The Imp intervenes in the reflective process. The Imp interrupts, questions, prods and pursues, reminding us of the oscillating tenor of fieldwork between worlds of comprehension and explanation; the immersion of surrender and the surfacing of the catch.

The Imp may be a destructive force – meddling with the commitment to surrender, interrupting the experience of the field, as the body does when it complains and aches. Conversely, it may provide the spur to continued engagement, the ego with which to continually begin again in the field. In the photographic studio, it asks: Why are you doing this? The answers (the catch) that it yields are multiple. On the one hand, the answer is pragmatic and analytic: in order to learn and document new techniques. But the Imp raises further, different, issues. The encounter is an aesthetic one, and it is hard to escape surrender to the erotic history of the nude model. The Imp draws attention to the struggles of total bracketing, of denying the influence of canonical works and of the importance of ethical awareness wrought by work on the male gaze and asymmetrical power relations in encounters. Where Wolff’s determined Romanticism seeks to silence the Imp through exhorting both total involvement and the suspension of received notions, we argue that paying attention to our inner Imps spurs the emergence of the ‘catch’ of fieldwork and grounds our ethical awareness in the ‘whatness’ of the activity itself. Silencing our Imps runs the risk of blinding our ethical and aesthetic sensibilities: it may negate the ability to listen to our bodies as they interject through tiredness or pain. Silencing the Imp may undermine our capacity for reflexivity as we grapple with the ‘inbetween-ness’ of the Me and I, the materiality and intersubjectivity of the field and the production of our ongoing jottings and catches. The Imp itself may become the catch – the nagging sense of unease reveals the artfulness of civil disattention in the studio and its complex accomplishment; the discomforting heat of the studio light gives us insight to the control of the body exerted by models and photographers alike.

We have also attempted to show how ‘surrender’ is sometimes necessary, rather than the classic description of the ethnographer who reserves something of her/himself. Fully
participant observation is sometimes needed. Indeed, in many settings, one cannot be only partly engaged. One certainly cannot commit oneself less than fully to the multiple tasks of learning practical skills. The activities demand full attention, otherwise, there is no learning and hence no phenomenon. But surrender also demands the catch. Without the catch the surrender is idle.

Ethnography always has a dual aspect. Participant engagement with a given social world is an existential commitment. Reflection and analysis are the concomitant processes of intellectual work. They operate iteratively and concurrently. As we have illustrated, Wolff’s writing on surrender-and-catch portrays ethnography’s distinctive imagination in a particularly forceful manner. Thinking ethnographically (Atkinson 2017) is necessarily informed by personal and disciplinary commitments. We move forward on both fronts, and as we do so the principle of reflexivity can conjure up the Imp of fieldwork. It troubles any complacency on our part, and it animates the necessary inner dialogue that animates ethnographic work. Surrender and catch together suggest ways in which analytic, realist ethnographers and evocative autoethnographers might find paths towards rapprochement.
