Protecting students from harassment and sexual assault: A human-centred design approach

Programme of the 11th Annual International Forum

Authors
Introduction

This tenth edition of “International Perspectives of Crime Prevention” includes a selection of the outcomes of the 11th Annual International Forum which took place within the 22nd German Congress on Crime Prevention. The Congress was held on 19th and 20th of June 2017 in Hanover and gathered together about 3,000 people from the field of crime prevention in Germany and worldwide. The main topic of this congress was “Prevention & Integration”. The programme of the 11th Annual International Forum is printed at the end of this book.

The first two articles reflect parts of the opening event of the Congress: The opening speech, held by Erich Marks, and the speech on the main theme “Prevention & Integration” held by Wiebke Steffen. The third contribution is the so-called “Prevention Speech” held at the closing event of the Congress by Wieland Machleidt. In this speech the process of integration is compared with the developmental phase of adolescence, a socio-psychological view that gives new insights into the current challenges of migration.

The following essays of this book contain a range of topics which were presented during the international lectures of the Congress in Hanover. Dorota Habrat discusses the issue of criminal corporate liability, in particular with regard to the case law in Poland and the question of individual or collective liability. Anika Holterhof and Johannes de Haan present the work of the United Office on Drugs and Crime (UNODC) on promoting a participatory approach to crime prevention by highlighting two technical assistance projects. One is on participatory crime diagnosis and policy development and the other on the use of sports for early crime prevention. Tao-Hsin Tung et al. have done a meta-analysis of community treatment effects on the rate of child sexual reoffendings. They indicate that while there is reason to believe that these measures are effective, further studies are needed to provide clear evidence. Catrin Trautmann presents the outcomes of the pre-conference on Countering Violent Extremism, which took place on the days before the German Congress on Crime Prevention. Besides the exchange of knowledge on prevention measures on radicalisation, the meeting enabled possibilities to develop cooperation structures. And finally ProtectED, a not-for-profit membership organisation and
accreditation scheme, is introduced by Andrew B. Wootton, Caroline L. Davey and Lucy Winrow. This supports member universities in the UK to tackle harassment and sexual assault as part of a wider programme of measures to ensure their students’ safety, security and wellbeing.

The German Congress on Crime Prevention is an annual event that takes place since 1995 in different German cities and targets all areas of crime prevention: Administration, youth welfare, the judiciary, churches, local authorities, the media, politics, the police, crime prevention committees, projects, schools, the health system, organisations, associations and science. The desired effect is to present and strengthen crime prevention within a broad societal framework. Thus it contributes to combating crime and reducing the risk of becoming a victim. In addition, this is associated with reducing the fear of crime among the population.

The main objectives of the congress are:

- Presenting and exchanging current and basic questions of crime prevention and its effectiveness.
- Bringing together partners within the field of crime prevention.
- Functioning as a forum for the practice, and fostering the exchange of experiences.
- Helping to get contacts at an international level and to exchange information.
- Discussing implementation strategies.
- Developing and disseminating recommendations for practice, politics, administration and research.

Since its foundation, the German Congress on Crime Prevention has been opened to an international audience with a growing number of non-German speaking participants joining. Because prevention is more than a national concern and should be focused internationally this step seemed crucial. Bringing together not only German scientists and practitioners but also international experts in crime prevention and thus developing a transnational forum to foster the exchange of knowledge and experience constitutes the main focus of this approach. To give the international guests a discussion forum, the Annual International Forum within the German Congress on Crime Prevention was established in 2007. For non-German speaking guests this event offers lectures in English language as well as other activities within the Ger-
man Congress on Crime Prevention that are translated simultaneously. International guests are able to play an active role by giving lectures, presenting posters or displaying information within the exhibition.

We hope to find a broad audience, interested in the upcoming events of the Annual International Forum as well as the German Congress on Crime Prevention. For more information please visit our website at www.gcocp.org.

Claudia Heinzelmann and Erich Marks
Protecting students from harassment and sexual assault: A human-centred design approach

1.0 Summary

Student harassment and sexual assault are key concerns for universities. The impact that such incidents have on student victims can be significant – and can have consequences for a university’s reputation. Female students are particularly at risk during nights out, where unsafe routes home increase vulnerability and alcohol may fuel risky, transgressive and/or abusive behaviour.

Design researchers at the University of Salford (UK) have developed a Code of Practice and accreditation scheme to improve student safety, security and wellbeing in higher education. ProtectED (www.ProtectED.org) was developed through a human-centred design research and innovation process. Investigations highlighted the need for universities to adopt a more ‘joined-up’ approach to tackling student harassment, as incidents may occur on and off campus as well as online, and students may be targeted for a wide variety of reasons, including their gender, race, religion or sexual orientation.

In 2017, ProtectED launched as a not-for-profit membership organisation and accreditation scheme. ProtectED supports member universities in tackling harassment and sexual assault as part of a wider programme of measures to ensure their students’ safety, security and wellbeing. To this end, ProtectED promotes partnership working at all levels of an institution – both internally and externally – and uses aggregated and anonymised member data to inform service improvement across the ProtectED membership.

This paper firstly describes the research and development of ProtectED, and its approach to tackling student safety, security and wellbeing. Secondly, this paper presents ProtectED Instrument 3 on student harassment and sexual assault, giving examples of good practice in this area. This paper contributes to a wider body of literature on the practices, policies and initiatives for improving practice and raising
standards in the higher education sector and enhancing the student experience (The Drinkaware programme, 2016, 2018; Equality Challenge Unit, 2015 – Athena SWAN; NUS, 2011; NUS Alcohol Impact, 2018; Revolt, 2018; The 1752 Group, 2017, 2018; Universities UK, 2016, 2018; ). The paper concludes with a discussion of the challenges facing Higher Education Institutions (HEIs) seeking to tackle student harassment and sexual assault.

2.0 Introduction

Harassment and sexual assault are key concerns for universities due to the serious psychological (Rape Crisis, 27.08.2018) and academic impact that such incidents can have on student victims, and the consequential damage to an institution’s reputation. The risks for a female student from a male student or acquaintance on a night out are well-documented. The NUS *Hidden Marks* report found that 81 percent of victims of serious sexual assault knew their attacker, compared to 53 percent of women subjected to less serious forms of sexual assault (NUS, 2011a – 2nd Edition). It is becoming increasingly apparent that staff-to-student sexual misconduct is also an issue for universities. As recent findings show, over 40 percent of students have experienced sexualised behaviour from staff (NUS, 2018). This is set against the backdrop of the #MeToo movement, which has seen the mainstream media highlight the problems facing women not just at university, but across many different sectors.

There are a number of initiatives and practices to prevent and mitigate the impact of harassment and sexual assault, but the higher education sector has yet to implement a consistent and effective approach.

Researchers at the University of Salford (UK) have developed the ProtectED Code of Practice and accreditation scheme to improve student safety, security and wellbeing in higher education. ProtectED has been established as a membership organisation and is recruiting Founder Member institutions who will be supported by the ProtectED team to tackle harassment and sexual assault as part of a wider programme of measures designed to raise standards in student safety, security and wellbeing and improve the student experience.

3.0 Background to ProtectED

*ProtectED* is the first membership organisation and national accreditation scheme to assess student safety, security and wellbeing at
UK universities. Launched in February 2017, the ProtectED Code of Practice is the first higher education guidance document to take a comprehensive view across the student experience. Structured in five parts, the ProtectED Code of Practice consists of a central section entitled “Core Institutional Safety & Security” – what might be considered ‘traditional’ university security – together with four issue-focused ‘instruments’.

- Instrument 1: Student wellbeing & mental health
- Instrument 2: International students
- Instrument 3: Student harassment & sexual assault
- Instrument 4: Student night out

The ProtectED Code of Practice is designed with an extensible structure to enable the scheme to continue to develop, as well as to respond to emerging issues. In 2019, the ProtectED team will begin research on Instrument 5, around student living, accommodation and housing.

The ProtectED Code of Practice identifies minimum requirements relating to university policies, processes and practice. It draws on expert recommendations and existing good practice guidance, and is illustrated with relevant case studies from the higher education sector.

Partnership working is at the heart of efforts to address student safety, security and wellbeing. ProtectED members are encouraged to work across internal departments, as well as to collaborate with external agencies – including local authorities, police and health services. Collaborative working of this kind is enabled by the establishment of a ProtectED Safety & Wellbeing Partnership (PSWP) (see Figure 1).
Figure 1. The ProtectED structure, centred around the PSWP

The Code Practice is available for download in PDF format from the ProtectED website (www.protect-ed.org). The option to submit for ProtectED Accreditation is only available to ProtectED member universities. Such member institutions are required to sign up to the ProtectED Principles (see Figure 2) and pay an annual membership fee. This membership fee covers the financial costs of delivering the accreditation process and enables ProtectED staff to support member institutions in improving standards.
The ProtectED Principles

1. Students cannot reach their full potential when impeded by issues affecting their safety, security and wellbeing.

2. Higher education institutions have a duty to develop and implement appropriate policies, processes and procedures that support student safety, security and wellbeing.

3. Ensuring the safety, security and wellbeing of students requires a ‘joined-up’ approach across the student experience – partnership working is essential.

4. The importance of all higher education staff and students in nurturing a positive, caring and inclusive learning environment for all students in the institution.

5. Effectively tackling issues of student safety, security and wellbeing requires well-founded intelligence.

Figure 2. The ProtectED Principles

As they work towards accreditation, ProtectED member institutions are supported by the ProtectED team and given access to members-only support materials – including Self-Assessment Workbook Guides relating to each area of the Code of Practice. The Workbook Guides provide advice and clarification on meeting the criteria outlined in the Code of Practice, and explain how an institution should evidence this in their application for accreditation.

ProtectED Member institutions will be provided insights into ‘what works and why’ when addressing key student welfare issues, obtained from analysis of aggregated and anonymised data derived from universities going through the ProtectED accreditation process. Member institutions can also access the ProtectED Exchange; a knowledge sharing platform on the ProtectED website that includes a directory of university case studies to support student safety, security and wellbeing. It is also a live forum where member institutions can share ideas, experiences and expertise to better support their students.

4.0 The design and development of ProtectED

The idea for ProtectED came from security practitioners working in the higher education sector. This was developed into a Code of Practice and accreditation scheme through a process of creative design research involving:
4.1 Problem framing

In early 2014, the Design Against Crime Solution Centre at the University of Salford was approached by the institution’s Head of Security, Trevor Jones, and the Director of K7 Compliance Ltd., Brian Nuttall, a security auditor. The security practitioners wanted to discuss their concerns about security across the education sector, and present their thoughts on a possible way forward. This involved a standard for university security oriented towards security managers, which drew on the Security Industry Authority’s (SIA) Approved Contractor Scheme.

The Design Against Crime Solution Centre offers a distinctive approach, considering ‘design’ as relating not only to the form of physical products and environments, but also to the creative formulation of research concepts, methods and analyses. The Solution Centre’s mission is:

To apply rigorous social science research and innovative ‘design thinking’ to crime, security and related social challenges, to deliver human-centred, design-led solutions that reduce victimisation, improve wellbeing and meet the needs of stakeholders.

Over the past fifteen years, the Solution Centre has developed and utilised design research methods to address problems related to crime, insecurity and wellbeing (Davey and Wootton, 2014, 2016, 2017; Davey; Wootton and Davey, 2016).

The researchers proposed extending the original concept to consider the student experience related to safety, security and wellbeing – both on and off-campus. The new concept was branded ProtectED.

A research plan was developed with the aim of understanding existing fragmentation of practice across the sector, and also – in view of its human-centred design perspective – exploring potential solutions. Importantly, ProtectED is designed to respond to the ‘problem context’ – working from a clear understanding of the issues, circumstances and context related to higher education in the UK that are preventing students from reaching their potential. A Research Fellow was recruited by the Solution Centre to undertake the research.
The process of design and development is summarised below – see Figure 3, *ProtectED Development Timeline*.

4.2 Establishing an Advisory Board

A Community of Interest event was held for higher education sector professional bodies and relevant external agencies to validate the ProtectED concept and provide input into research and development plans. Attendees agreed to participate in the ProtectED Advisory Board.

Advisory Board members represent organisations central to the delivery and improvement of higher education and cover the different issues related to the student experience, including: the Security Industry Authority (SIA); Association of University Chief Security Officers (AUCSO); International Professional Security Association; British Council; Association of Managers of Student Services in Higher Education (AMOSSHE); University Mental Health Advisors Network (UMHAN); Greater Manchester Police (GMP); Police Association of Higher Education Liaison Officers (PAHELO); College & University Business Officers (CUBO); the British Security Industry Association (BSIA); National Landlords Association; and Endsleigh Insurance.

4.3 Action research

To better understand the main safety, security and wellbeing issues facing universities, empirical research was conducted in 2015. Both quantitative and qualitative data were collected.

4.3.1 Quantitative data

Survey data was collected using an online survey. Participants were recruited through links with professional bodies in the sector and the National Union of Students, as shown in Figure 4.

Figure 4. Survey participants
4.3.2 Qualitative data

Focus groups were conducted with:

- Those responsible for higher education institution safety and security – university security managers and police officers working with higher education institutions
- Students’ Union officers providing support to students in relation to issues of safety and wellbeing.

Focus group participants were recruited with the support of three professional bodies: (i) Association of University Chief Security Officers (AUCSO); (ii) Police Association of Higher Education Liaison Officers (PAHELO); and (iii) the National Union of Students (NUS). More details regarding focus group participants are provided in Figure 5, below.

Figure 5. Focus group participants

Focus group question routes were developed for each group, following a semi-structured format (Marselle, 2016).

4.3.3 Identification of themes

Issues or themes relevant to student safety, security and wellbeing were identified from a frequency analysis and content analysis of the qualitative and quantitative data (Marselle, 2016). Six issues / themes were identified:

1. University security – crime and incident data; police higher education liaison officer role; partnership working
2. Student wellbeing and mental health
3. International students
4. Harassment and sexual assault
5. Late night economy and travel off campus
6. Living off campus and student accommodation

4.4 Concept generation, development and prototyping

In collaboration with K7 Compliance Ltd. and the Salford Security Manager, the ProtectED researchers refined the Core Institutional Safety and Security component of the Code of Practice – which draws on the Security Industry Authority Approved Contractor Scheme published in 2012. Informed by the research findings, the structure and format for the Code of Practice and accreditation scheme was designed. The scheme’s design included resources – referred to as ‘instruments’ – to enable universities to review their capacity to address specific issues. Instruments were developed to address issues 2 to 5 emerging from the research. The criteria and examples presented in the Code of Practice were identified from existing publications and guidance materials.

The structure of the Code of Practice and its content was reviewed by the Advisory Board, and revisions made based on their feedback. In February 2016, the ProtectED accreditation process was prototyped with two UK universities. After further revision, the final ProtectED Code of Practice was formally launched February 2017.

The next section presents the instrument to tackle Student Harassment and Sexual Assault.

5.0 Harassment & Sexual Assault

As mentioned above, ProtectED instruments were developed in response to action research with university security managers, police officers, students and student representatives.

5.1 Research findings

Community safety, safe routes home at night, harassment, stalking and sexual assault were considered priorities by Student Union Sabbatical Officers – who provide support to students and were able to represent their concerns. Security managers said that sector priorities included: drugs or legal highs; alcohol and vulnerability due to alcohol. Sexual assault was identified as being a high-impact problem for the sector. Focus group participants pointed out that incidents of harassment might relate to gender, ethnicity or sexuali-
ty, and that harassment via the Internet was increasingly a problem (Marselle, 2016).

Focus group participants identified that a university failing to deal sensitively and effectively with incidents of harassment and sexual assault can result in a victim dropping out of their course (Marselle, 2016).

However, problems of harassment and sexual assault in the UK higher education sector are not new. In 2011, a National Union of Students (NUS) report found that 68 percent of female students had experienced verbal or physical sexual harassment. In addition, the scale of the problem was starting to be highlighted by the media. In 2015, a Telegraph headline stated: “One in three UK female students sexually assaulted or abused on campus” (Goldhill & Bingham, 2015).

Research also highlighted links to the late night economy, as harassment and sexual assault often occur during a student night out. An online survey found that 54 percent of female students and 15 percent of male students had been sexually harassed on a night out (The Drinkaware Trust, 2016).

While some security managers were primarily concerned about problems that occurred on campus, others said that their responsibility extended to student safety and security off-campus – when in the city centre, during a student night out, or when travelling home to their accommodation. In some universities, security managers are prepared to organise transport for students that are at risk of victimisation:

“You know, our CCTV at night is watching students that are drunk. You’re vulnerable... and part of our role is to make sure they get home safe – And if it means sending the van, that’s exactly what we’d do.”

(Security Manager, Focus Group participant)

According to security managers, incidents of harassment and sexual assault have the greatest impact on the victim and wider implications for the institution. Media coverage of a university admitting to even tackling such incidents may damage its reputation – a point discussed in a focus group:

“If the University publicly acknowledged the problem, then – unless every University does it – it makes it look like there’s a specific issue with [University X] and their sexual harassment
problem. And I think they think it will impact on prospective students. I don’t think it does. I personally think that I’d rather the University… put their hands up and be like, ‘This is an issue – we’re tackling it!’”

(Security Manager, Focus Group participant)

Unfortunately, the majority of incidents never come to the attention of relevant authorities – therefore limiting opportunities to support the victim or deal with the perpetrator. A ProtectED survey of students administered in 2016 via the National Union of Students (NUS) member database revealed that 90 percent of respondents who experienced sexual harassment did not report the incident to the police; and 86 percent did not inform their university (Davey, Wootton and Marselle, 2016).

5.2 ProtectED approach to student harassment & sexual assault

The Solution Centre developed a conceptual model to help communicate the ProtectED approach to harassment and sexual assault, as well as structure the specific measures and criteria in an effective way. The focus of Instrument 3 is on preventing harassment and sexual assault, and on promoting reporting options and support services should an incident occur. The Student Harassment and Sexual Assault instrument is divided into six sections (see Figure 6).

![Diagram](image)

**Figure 6. Structure of ProtectED Instrument 3: Student Harassment & Sexual Assault**

Section 1, ‘Student Harassment and Sexual Assault Policy’ and Section 6, ‘ProtectED Safety & Wellbeing Partnership (PSWP)’, provide the foundation and support for activities in Sections 2 to 5.
Section 2 of the Instrument focuses on raising awareness of the problem of harassment and sexual assault and providing information about relevant support services. Section 3 continues the prevention focus by concentrating on mitigating hot-spot situations and locations in and around the university campus.

Section 4 of the Instrument, ‘Service Management and Delivery’ – focuses on ensuring that support is available to students who need it. Section 5 specifically addresses the HEI’s response to incidents of harassment or sexual assault.

The criteria, guidelines and examples were identified from a review of published literature and existing guidelines and practical case study examples – including NUS, 2011; Universities UK, 2016, 2018; The Drinkaware programme, 2016, 2018; Equality Challenge Unit, Athena SWAN, 2015.

5.3 Criteria: Harassment and Sexual Assault

In Section 1, the Student Harassment and Sexual Assault instrument requires member universities to have a formal written policy on harassment and sexual assault, including an equality and diversity policy. The policy should extend to coverage of harassment and bullying via email, social media, Internet, etc.–i.e. cyberbullying. The UK government universities minister, Sam Gyimah, recently emphasised the impact of social media and cyberbullying on the mental wellbeing of young people, and the need for social media companies to take their duty of care to users seriously (Turner, 2018).

ProtectED expects universities to go beyond simply having a formal policy, and to embed appropriate behaviour into everyday practices. As explained in Section 2 of the instrument, this involves the institution promoting initiatives to raise awareness of harassment and sexual assault and promote relevant services. Students should be made aware of standards of behaviour that are expected, and disciplinary sanctions in cases where a student fails to maintain such standards. Students also need to be clear on what behaviour constitutes sexual harassment, as the fear that their experience is “not serious enough” is a barrier to reporting and seeking support. ProtectED members are expected
to run sexual consent workshops for new students, as well as provide training in the appropriate use of social media. Universities UK (2016) advocates that standards of behaviour should be communicated and enforced through a partnership agreement between the student and their university or through a code of practice. Importantly, universities are also expected to provide training for students’ friends on how to respond effectively if a friend tells them about an experience of sexual assault, such as the Student Minds ‘Look After Your Mate’ workshop.

In addition, universities must take a ‘whole institution’ approach to disseminating information and providing training to raise awareness of problems of bullying, harassment and sexual assault, which can take different forms, including: organising events that celebrate diversity and encourage integration; running campaigns that communicate a zero-tolerance message; and educating the university population on what constitutes hate crime and harassment. Training on how to respond to a report of harassment or sexual assault is particularly relevant for staff responsible for supporting students or providing pastoral care.

‘We Get It’ campaign – Zero Tolerance to Bullying and Sexual Harassment

The University of Manchester and their Students’ Union have launched a campaign of zero tolerance towards any form of bullying, sexual harassment and discrimination that occurs on or off campus – including in bars, nightclubs, halls of residence, public transport and online.

The campaign encourages reporting of harassment and for the victim to talk confidently to a trained Harassment Advisor, as well as access support services. To show support for the campaign, staff and students are invited to sign an online pledge against sexual harassment of any kind: “Manchester gets it – harassment isn’t acceptable”, as well as wear a We Get It wristband to show their support.

The campaign was runner-up in the 2015 NUS Awards.

HEIs or Student Unions in the UK run ‘Active Bystander Workshops’ whereby individuals learn techniques to challenge harassment. Such workshops train someone who observes unacceptable behaviour – a bystander – to act or challenge that behaviour (Vidler, 2018).
Section 3 of the Instrument focuses on mitigating hot spot situations – specific geographic areas and locations where crime and insecurity tend to be concentrated. For example, venues frequented by students – especially during the first few weeks of the first year, or in social spaces and events. The Revolt Sexual Assault survey (2018) found that 23 percent of incidents of sexual assault or harassment took place in university social spaces and 24 percent at social events.

*ProtectED* expects universities and students’ union venues to sign a zero-tolerance pledge in relation to hate crime, harassment and sexual assault, and to engage off-campus venues that are frequented by students in this initiative. Venue staff should be trained to recognise and address harassment, and to assist vulnerable adults – for example, to intervene if a heavily intoxicated woman is approached and escorted from the venue by a male student, acquaintance or stranger.

Section 4 of the instrument, ‘Service Management and Delivery’, seeks to assess whether an institution provides, widely promotes and encourages the use of support services for victims of harassment or sexual assault – as well as alleged perpetrators. The institution must provide adequate support for all those involved, especially for the reporting student and the alleged student perpetrator, as well as handle alleged student misconduct that may also constitute a criminal offence (Universities UK, 2016, p. 6).

If hate is directed towards a student on the grounds of his or her religious beliefs, *ProtectED* universities must offer accessible ways for students to report such behaviour. Harassment and sexual assault services must also be adequately resourced and available out of hours.

Incidents need to be recorded and collated in a centralised recording system, to ensure institutions can track the nature and prevalence of harassment in the university community. Universities are encouraged to provide an anonymous online form where students can create a secure, time-stamped record of their report. This is to make the process as accessible and user-friendly as possible. The university is also required to develop working links with the police to allow students to easily report a harassment or a hate incident. In order to understand the level of unreported incidents of harassment and sexual assault, universities are expected to conduct regular victimisation surveys of students.
Technology to support victims of sexual assault and harassment – an innovative good practice example

The Callisto App lets a victim report a sexual assault anonymously – and alerts the victim if someone has previously named the same perpetrator. The App facilitates the saving of a time-stamped written record of harassment or sexual assault.

Under the Callisto system, a victim inputs the identity of the perpetrator(s) under the precondition that, if a match is found, a Callisto Counsellor will reach out to each victim individually. The Callisto Counsellor advises each victim on the options available following a match, including formally reporting the perpetrator – if this is the right route for them.

The Callisto website reports that an estimated 20 percent of women, 7 percent of men, and 24 percent of trans and gender nonconforming students are sexually assaulted during their college career. It is important to note that an estimated 90 percent of sexual assaults are committed by repeat perpetrators – and the assailant is, in most cases, known to the victim.

Less than 10 percent of victims report to their university or the police. Callisto encourages reporting, and leads to harassment or sexual assault being reported faster – over average, after 4 months rather than 11 months.

[SOURCE: Callisto website (accessed 08.05.18) Tech to combat sexual assault & harassment. https://www.projectcallisto.org]

Section 5 of the instrument covers ‘Responding to Incidents of Harassment or Sexual Assault’. Following an incident, ProtectED requires universities to have support measures in place for the victim. This could include a dedicated counsellor or support officer. Such support services must be clearly promoted to students, ideally during awareness-raising initiatives and campaigns.

As part of ProtectED’s student safety measures, a campus safety audit must be conducted – preferably on an annual basis. This needs to include student input so as to allow the university to clearly understand which areas of the campus students feel are particularly unsafe, and the types of problems that they face. This process should inform campus improvement plans, which might include, for example, additional lighting, CCTV or security patrols.
Section 6 of the instrument refers to the ProtectED Safety and Wellbeing Partnership (PSWP). Universities are asked to establish a ProtectED Safety and Wellbeing Partnership (PSWP) comprising internal university staff and external groups such as the police, local council, NHS representatives and relevant charities, agencies and experts. This group should meet regularly and have information sharing agreements in place to help them to collectively direct their knowledge and resources in their efforts to tackle all forms of harassment and support student victims and to ensure an efficient, effective response, following a disclosure from a student.

Finally, ProtectED member institutions are required to share data they collect on student safety and wellbeing with ProtectED. This data is anonymised, aggregated and analysed to create a more reliable evidence base to work from when tackling these important student experience issues. Such research will also help generate a more accurate picture of student safety, security and wellbeing issues across the HE sector, where the problems lie, and what solutions are effective. Ultimately, this research will benefit ProtectED member institutions and the university experience of their students.

6.0 Conclusion and discussion

The recommendations and requirements addressing student harassment and sexual assault contained in ProtectED Instrument 3 draw on existing published guidelines, good practice recommendations and expert advice – rather than being invented by ProtectED. The difference between ProtectED and other approaches to tackling harassment and sexual assault lies in how the guidance is implemented and presented. In relation to ProtectED, member universities must address student harassment and sexual assault as part of a comprehensive programme of measures dealing with student safety, security and wellbeing issues.

ProtectED members are supported to work towards ProtectED accreditation through: access to detailed Workbook Guides on each aspect of ProtectED; the provision of case study examples; access to peer-support via the ProtectED Exchange members online forum; consultation with experts in the ProtectED team. In this way, ProtectED offers universities a practical and sustainable approach to tackling student harassment and sexual assault, as well as other issues facing their students.
6.1 Public awareness of the problem – a driver for change

Media coverage of student victimisation results in reputational damage for the institution, while publicised incidents at one university can impact negatively on neighbouring universities.

In recent years, UK universities have increasingly come under the media spotlight regarding a range of student security and welfare problems – much to the unease of university leaders. A campaign by The Guardian newspaper gathered over 100 accounts of staff-to-student sexual harassment, reportedly revealing “a hidden pattern” of abuse in the HE sector (Weale and Batty, 2016a). Controversially, in some cases institutions ask the victim to sign a Non-disclosure Agreement (Weale and Batty, 2016b).

In 2017, a number of newspapers reported “Sexual harassment, at epidemic levels in UK universities” (Batty, Weale and Bannock, 2017a).

Media reports suggest UK universities are not doing enough to address sexual violence, and need to do more – a point echoed both by campaigners and politicians (Weale & Bannock, 2017; Weale & Batty, 2017b). For example, a report in December 2017 suggested that 39 percent of UK universities do not provide any staff training around sexual misconduct and of those that do, this training is optional. Such reports have seen UK institutions accused of “complacency over sexual misconduct.” (Batty, Bengtsson and Weale, 2017).

Universities are also being accused of lacking a strategic approach to safety and security problems facing students and failing to support victims (Winrow, 2017). It is argued that this contributes to the minority of students who actually report harassment “feeling inferior and degraded” (Weale and Bannock, 2017).

6.2 Improving the student experience

UK universities compete to attract fee-paying students from the UK, European Union and internationally. Improving student safety, security and wellbeing enables institutions to improve the ‘student experience’ they provide, and attract, recruit and retain students. Ensuring a positive student experience has become a focus for UK universities, with institutions seeking to ensure satisfaction across all aspects of student life: on campus and off; academic and social.
“Supporting and enhancing the student experience throughout the student lifecycle (from first contact through to becoming alumni) is critical to the success in higher education today for both the student and the institution.”

(Student Experience Website, http://www.improvingthestudentexperience.com).

6.3 Active leadership

The organisation Universities UK is the collective voice for higher education in the UK, comprising vice-chancellors and principals of 136 universities in England, Scotland, Wales and Northern Ireland (Universities UK 2018b).

In March 2018, Universities UK published the “Changing the Culture: One year on” report, reflecting on progress made in the HE sector since 2016 to address sexual misconduct, hate crime and harassment affecting university students. The report highlights that “significant but variable progress” has been made, and that more needs to be done. As discussed earlier, addressing the widely varying standard of student support in UK universities was a primary motivation for the development of ProtectED.

The Universities UK 2018 report identifies “active senior leadership in this area” as being vital to progress. ProtectED recognises the importance of senior leadership in enabling the ‘whole institution approach’ required to effectively address student safety, security and wellbeing (Universities UK, 2018a). For this reason, ProtectED membership requires a letter of commitment from the institutional lead (Vice Chancellor, Principal or equivalent) to adopt the principles of ProtectED within their policies, structures and processes.

The sharing of good practice is also identified in the report as having contributed to progress made (Universities UK, 2018a). ProtectED membership aims to create a community of universities, focused on collaborative working as they implement the good practice recommendations contained within the ProtectED Code of Practice. Members are supported in this by the ProtectED Exchange online forum and case examples provided within the ProtectED Workbook Guides.
6.4 Incident reporting and recording

Experience suggests that incident reporting and recording presents a number of challenges for UK universities – particularly in relation to sensitive issues such as harassment and sexual assault. Universities UK reports that centralised systems and processes for the collection and recording of data on sexual misconduct, hate crime and hate-based harassment remain underdeveloped across the sector (Universities UK, 2018).

Universities that introduce better policies and practices to tackle harassment and sexual assault tend to experience an increase in students reporting incidents – either to the university or the police. This risks deterring improvement action by universities as media reports of increased incident numbers may be misinterpreted as evidence of increased problems (Dixon, 2018; Weale, 2018). Thus, increased incident reporting should be seen as a step forward in identifying and responding to harassment and sexual assault. However, even when journalists attempt to correct the misunderstanding, news headlines about harassment and sexual assault carry potential risk to an institution’s reputation.

For example, one 2018 newspaper headline read: “University of Cambridge admits significant sexual misconduct problem: Institution receives 173 complaints of improper behaviour in nine months” (Weale, 2018). The article went on to state that the University of Cambridge recorded the most incidents compared to other institutions, only later mentioning that Cambridge is one of only a handful of institutions to introduce anonymous reporting for students – and the first to report any results. While the article does point out that a high number of reports was to be expected due to the anonymous nature of the reporting system, anyone scanning the headlines and opening paragraphs would have been hard pressed to view the report as a good news story on improving university practice.
University of Cambridge Anonymous Reporting System

On its website, the University of Cambridge offers a form to enable anyone who is or has been a student, staff or visitor to the University to anonymously report harassment, hate crime and sexual misconduct. The University provides such a system because people may find it difficult or will not want to report this type of behaviour.

The University of Cambridge does not offer direct advice or investigate a matter reported through the anonymous reporting tool. An individual can formally report an incident to the College, University, or the Police.

The University provides a Counselling service that includes a full-time specialist support worker for those who have experienced sexual violence.

6.5 Transferability of ProtectED

ProtectED was developed to improve practice in UK universities across a number of student issues, including student harassment and sexual assault. Problems of harassment and sexual assault are certainly not limited to higher education in the UK, however. They exist across a number of different but related contexts, including Further Education and even the school sector. Furthermore, higher education institutions in other countries are also experiencing problems of student harassment and sexual assault (see for example: Baumgartner and McAdon, 2017; Bedi, 2015; South China Morning Post, 2017). Transplanting ProtectED to such different contexts is possible – the principles on which it is based remain true and the means by which accreditation is delivered are practicable. Specific indicators may need to be added or amended, but the potential benefits to students of improved and more effective institutional practice are substantial.

8.0 Acknowledgements

The authors would like to acknowledge support from all the higher education staff, police officers and students who participated in the ProtectED research. The research was conducted with support from the Design Against Crime Solution Centre Research Fellow, Dr Melissa R. Marselle. We are particularly grateful to members of the ProtectED Advisory Board for their contribution to the research and development of ProtectED and for their continued support.
Programme of the 11\textsuperscript{th} Annual International Forum
### Monday, 19 June 2017

#### 11:00-12:30 – Opening Plenum of the German Congress on Crime Prevention (GCOCP)
Venue: Hannover Congress Center, Kuppelsaal

- **Erich Marks**, Executive Director of the GCOCP
- **Stephan Weil**, Prime Minister of the Federal State of Lower Saxony
- **Stefan Schostok**, Lord Mayor of the City of Hannover
- **Prof. Dr. Hans-Jürgen Kern**, Congress President and President of the German Foundation for Crime Prevention and Assistance of Criminal Offenders
- **Prof. Dr. Ute Ingrid Haas**, Chairwoman of the Crime Prevention Council of Lower Saxony
- **Dr. Andreas Arnborst**, Head of the National Center for Crime Prevention
- **Dr. Wiebke Steffen**, Scientific Consultant of the German Congress on Crime Prevention

#### 13:15-14:00 – Guided Tour through the exhibition area in English language
Limited access, if interested please contact: aif@praeventionstag.de

---

#### 14:00-16:00
Venue: Neuer Saal

- **Chair**: Prof. Dr. Marc Coester, Berlin School of Economics and Law, Germany

- **Prevention of human trafficking in the refugee crisis**
  - Dr. Karin Bruckmüller, Austria

- **Migration and crime in Austria – What do we really know?**
  - Prof. Dr. Christian Graff, Austria

- **GCOCP’s contribution to the international integration of crime prevention**
  - Prof. Dr. Dr. Grgori Moshak, Ukraine
  - Wadim Skriptschenko, Ukraine
  - Dr. Izhina Sologova, Ukraine

#### 14:00-16:00
Venue: Runder Saal

- **Chair**: Petra Guder, Glen Mills Academie Deutschland e.V., Germany

- **4. US Juvenile Justice Forum**
  - Dr. Stephanie Bradley, USA
  - Hon. Judge Ernestine Gray, USA
  - Dr. Robert L. Listenbee, USA
  - Dr. Shawn Marsh, USA
  - Prof. Dr. Bernd-Rüdiger Sonnen, Germany

---

#### 16:30-18:30
Venue: Runder Saal

- **Chair**: Tim Brockmann, Leibniz Universität Hannover, Germany

- **Security report of the city of Lucerne: Integral security in (demographic) change**
  - Dr. Lilian Blaser, Switzerland
  - Maurice III, Switzerland

- **Corruption prevention advice in the public administration**
  - Olivia Aro-Wagerer, Austria
  - Isabella Spazierer-Vlaschitz, Austria

- **The Prevention Monitor – Developments and trends on the fear of crime in Austria**
  - Gerald Furian, Austria
