Correction to: The effects of dog management on *Echinococcus* spp. prevalence in villages on the eastern Tibetan Plateau, China

Xiaodong Weng¹, Zhiqiang Mu¹, Xu Wei¹, Xu Wang², Qingqiu Zuo¹, Shuo Ma¹, Youzhong Ding¹, Xiaoming Wang^{1,3}, Weiping Wu², Philip S. Craig⁵ and Zhenghuan Wang^{1,4,6*}

Correction to: *Parasites Vectors* (2020) 13:207

<https://doi.org/10.1186/s13071-020-04082-6>

Following publication of the original article [1], the authors flagged two errors in the Discussion:

The sentence “Dogs being male and older are two potential significant factors associated with higher *Echinococcus* spp. infection [11]” had been incorrectly written as “Dogs being male and older are two significant factors associated with higher *Echinococcus* spp. infection [11]”;

While the sentence “As to the age bias, the infection burden of *E. granulosus* could be significantly lower in dogs over five years-old, but not significant for *E. multilocularis* infection [11, 20]” had been given incorrectly as “As to the age bias, the infection burden of *E. granulosus* could be significantly higher in dogs over five years-old, but not significant for *E. multilocularis* infection [11, 20]”.

These errors have now been published in the original article.

The authors apologize for any inconvenience caused.
